**Conservation and the Genetics of Populations** Fred W. Allendorf, Gordon H. Luikart, Sally N. Aitken

Loss of biodiversity is among the greatest problems facing the world today. *Conservation and the Genetics of Populations* gives a comprehensive overview of the essential background, concepts, and tools needed to understand how genetic information can be used to conserve species threatened with extinction, and to manage species of ecological or commercial importance. New molecular techniques, statistical methods, and computer programs, genetic principles, and methods are becoming increasingly useful in the conservation of biological diversity. Using a balance of data and theory, coupled with basic and applied research examples, this book examines genetic and phenotypic variation in natural populations, the principles and mechanisms of evolutionary change, the interpretation of genetic data from natural populations, and how these can be applied to conservation. The book includes examples from plants, animals, and microbes in wild and captive populations.

This second edition contains new chapters on Climate Change and Exploited Populations as well as new sections on genomics, genetic monitoring, emerging diseases, metagenomics, and more. One-third of the references in this edition were published after the first edition.

Each of the 22 chapters and the statistical appendix have a Guest Box written by an expert in that particular topic (including James Crow, Louis Bernatchez, Loren Rieseberg, Rick Shine, and Lisette Waits).

This book is essential for advanced undergraduate and graduate students of conservation genetics, natural resource management, and conservation biology, as well as professional conservation biologists working for wildlife and habitat management agencies.

### **From reader reviews:**

#### **James Crow:**

Do you certainly one of people who can't read enjoyable if the sentence chained from the straightway, hold on guys that aren't like that. This Conservation and the Genetics of Populations book is readable simply by you who hate the perfect word style. You will find the information here are arrange for enjoyable reading through experience without leaving perhaps decrease the knowledge that want to offer to you. The writer regarding Conservation and the Genetics of Populations content conveys objective easily to understand by lots of people. The printed and e-book are not different in the content material but it just different by means of it. So , do you nevertheless thinking Conservation and the Genetics of Populations is not loveable to be your top collection reading book?

#### **Lindsay Washington:**

Do you have something that that suits you such as book? The reserve lovers usually prefer to choose book like comic, brief story and the biggest an example may be novel. Now, why not seeking Conservation and the Genetics of Populations that give your enjoyment preference will be satisfied simply by reading this book. Reading behavior all over the world can be said as the method for people to know world a great deal better then how they react toward the world. It can't be mentioned constantly that reading routine only for the geeky particular person but for all of you who wants to become success person. So , for all of you who want to start looking at as your good habit, you are able to pick Conservation and the Genetics of Populations become your own personal starter.

#### **Cheryl Edgerly:**

The book untitled Conservation and the Genetics of Populations contain a lot of information on it. The writer explains your girlfriend idea with easy means. The language is very easy to understand all the people, so do not really worry, you can easy to read that. The book was compiled by famous author. The author provides you in the new age of literary works. You can read this book because you can read on your smart phone, or device, so you can read the book within anywhere and anytime. If you want to buy the e-book, you can start their official web-site along with order it. Have a nice read.

#### **Cory Thomas:**

What is your hobby? Have you heard that will question when you got scholars? We believe that that issue was given by teacher to their students. Many kinds of hobby, Every person has different hobby. Therefore you know that little person similar to reading or as reading become their hobby. You need to know that reading is very important and book as to be the issue. Book is important thing to incorporate you knowledge, except your current teacher or lecturer. You see good news or update with regards to something by book. Numerous books that can you choose to use be your object. One of them are these claims Conservation and the Genetics of Populations.
