Transport Processes in Porous Media (Advanced Structured Materials) Frank A. Coutelieiris, J.M.P.Q. Delgado

The subject of this book is to study the porous media and the transport processes occur there. As a first step, the authors discuss several techniques for artificial representation of porous. Afterwards, they describe the single and multi phase flows in simplistic and complex porous structures in terms of macroscopic and microscopic equations as well as of their analytical and numerical solutions. Furthermore, macroscopic quantities such as permeability are introduced and reviewed. The book also discusses with mass transport processes in the porous media which are further strengthened by experimental validation and specific technological applications. This book makes use of state-of-the-art techniques for the modeling of transport processes in porous structures, and considers of realistic sorption mechanisms. It the applies advanced mathematical techniques for upscaling of the major quantities, and presents the experimental investigation and application, namely, experimental methods for the measurement of relevant transport properties. The main benefit of the book is that it discusses all the topics related to transport in porous media (including state-of-the-art applications) and presents some of the most important theoretical, numerical and experimental developments in porous media domain, providing a self-contained major reference that is appealing to both the scientists and the engineers. At the same time, these topics encounter a variety of scientific and engineering disciplines, such as chemical, civil, agricultural, mechanical engineering. The book is divided in several chapters that intend to be a resume of the current state of knowledge for benefit of related professionals and scientists.

From reader reviews:

Ashley Taylor:

Why don't make it to become your habit? Right now, try to ready your time to do the important behave, like looking for your favorite e-book and reading a e-book. Beside you can solve your problem; you can add your knowledge by the reserve entitled Transport Processes in Porous Media (Advanced Structured Materials). Try to make the book Transport Processes in Porous Media (Advanced Structured Materials) as your buddy. It means that it can for being your friend when you experience alone and beside that course make you smarter than ever before. Yeah, it is very fortunated in your case. The book makes you a lot more confidence because you can know every thing by the book. So , let us make new experience and knowledge with this book.

Johnnie Nystrom:

With other case, little people like to read book Transport Processes in Porous Media (Advanced Structured Materials). You can choose the best book if you appreciate reading a book. Provided that we know about how is important the book Transport Processes in Porous Media (Advanced Structured Materials). You can add know-how and of course you can around the world by way of a book. Absolutely right, because from book you can recognize everything! From your country until eventually foreign or abroad you will end up known. About simple matter until wonderful thing it is possible to know that. In this era, we can easily open a book or perhaps searching by internet system. It is called e-book. You should use it when you feel bored stiff to go to the library. Let's study.

Robert Haas:

This book untitled Transport Processes in Porous Media (Advanced Structured Materials) to be one of several books this best seller in this year, this is because when you read this publication you can get a lot of benefit on it. You will easily to buy this particular book in the book shop or you can order it through online. The publisher of the book sells the e-book too. It makes you quickly to read this book, since you can read this book in your Smartphone. So there is no reason to you to past this reserve from your list.

Karen Horton:

Would you one of the book lovers? If so, do you ever feeling doubt when you are in the book store? Try to pick one book that you find out the inside because don't ascertain book by its protect may doesn't work is difficult job because you are scared that the inside maybe not as fantastic as in the outside look likes. Maybe you answer could be Transport Processes in Porous Media (Advanced Structured Materials) why because the fantastic cover that make you consider about the content will not disappoint you actually. The inside or content is fantastic as the outside or even cover. Your reading sixth sense will directly make suggestions to pick up this book.
