János A. Bergou, Mark Hillery

**Introduction to the Theory of Quantum Information Processing (Graduate Texts in Physics)** János A. Bergou, Mark Hillery

*Introduction to the Theory of Quantum Information Processing* provides the material for a one-semester graduate level course on quantum information theory and quantum computing for students who have had a one-year graduate course in quantum mechanics. Many standard subjects are treated, such as density matrices, entanglement, quantum maps, quantum cryptography, and quantum codes. Also included are discussions of quantum machines and quantum walks. In addition, the book provides detailed treatments of several underlying fundamental principles of quantum theory, such as quantum measurements, the no-cloning and no-signaling theorems, and their consequences. Problems of various levels of difficulty supplement the text, with the most challenging problems bringing the reader to the forefront of active research.

This book provides a compact introduction to the fascinating and rapidly evolving interdisciplinary field of quantum information theory, and it prepares the reader for doing active research in this area.

### **From reader reviews:**

#### **Kim Scott:**

The e-book with title Introduction to the Theory of Quantum Information Processing (Graduate Texts in Physics) has a lot of information that you can understand it. You can get a lot of help after read this book. That book exist new understanding the information that exist in this e-book represented the condition of the world at this point. That is important to you to know how the improvement of the world. This particular book will bring you throughout new era of the globalization. You can read the e-book on your smart phone, so you can read the item anywhere you want.

#### **Theodore Huff:**

Reading can called thoughts hangout, why? Because when you are reading a book mainly book entitled Introduction to the Theory of Quantum Information Processing (Graduate Texts in Physics) your brain will drift away trough every dimension, wandering in each and every aspect that maybe unidentified for but surely might be your mind friends. Imaging each word written in a book then become one application form conclusion and explanation that will maybe you never get just before. The Introduction to the Theory of Quantum Information Processing (Graduate Texts in Physics) giving you an additional experience more than blown away the mind but also giving you useful info for your better life in this era. So now let us present to you the relaxing pattern here is your body and mind will be pleased when you are finished examining it, like winning a casino game. Do you want to try this extraordinary investing spare time activity?

#### **Donald Chapin:**

You may spend your free time to see this book this book. This Introduction to the Theory of Quantum Information Processing (Graduate Texts in Physics) is simple to bring you can read it in the park, in the beach, train along with soon. If you did not have got much space to bring the particular printed book, you can buy typically the e-book. It is make you better to read it. You can save typically the book in your smart phone. So there are a lot of benefits that you will get when one buys this book.

#### **Patricia Ramirez:**

That e-book can make you to feel relax. This kind of book Introduction to the Theory of Quantum Information Processing (Graduate Texts in Physics) was multi-colored and of course has pictures around. As we know that book Introduction to the Theory of Quantum Information Processing (Graduate Texts in Physics) has many kinds or category. Start from kids until adolescents. For example Naruto or Detective Conan you can read and believe you are the character on there. Therefore not at all of book tend to be make you bored, any it makes you feel happy, fun and rest. Try to choose the best book in your case and try to like reading which.
